

CONCURRENT ENROLLMENT AND COLLEGE-LEVEL COURSEWORK

Somersworth High School & Career Technical Center offers students several **concurrent enrollment programs** that allow students to earn college credits while in high school. Concurrent enrollment is defined by NACEP as “college-credit bearing courses taught to high school students by college approved high school teachers.”. Below are detailed descriptions of the programs that are available.

- **Project Running Start** offers SHS/CTC juniors and seniors college credit through the New Hampshire Community College System for a minimal fee of \$150.00 (financial assistance is available). Courses are taught by qualified high school instructors who teach designated college-level courses to students in the HS environment. Credits earned through this program are transferable to other colleges/universities.
- **SMCC Dual/Concurrent Enrollment** offers SHS juniors and seniors college credit through the Southern Maine Community College for no cost. Courses are taught by qualified high school instructors who teach designated college-level courses to students in the high school environment. Credits earned through this program are transferable to other colleges/universities.
- **Articulation Agreements** allow students to take qualifying high school classes that fulfill requirements for entry-level college courses through individual agreements between high schools & colleges. There is no cost associated with this program and credits earned can only be used at the college/university that holds the agreement.

NOTE: All concurrent enrollment offerings are re-established on an annual basis and are not guaranteed until the start of the school year. Please check the Somersworth High School Career Technical Center’s website or contact the CTC Career Counselor for the most current offerings
