

University of New Hampshire
**InterOperability
Laboratory**

2016 UNH-IOL High School Summer Internship

Who We Are

The University of New Hampshire InterOperability Laboratory was established in 1988 as a neutral third party to test networking and data communications devices and help foster multi-vendor interoperability. The UNH-IOL has partnered with universities, commercial companies, non-profit organizations and government agencies in order to provide quality assurance through these tests. It is also the only full-scale, non-profit test lab in the world that balances industry expertise with the real-world training of future engineers. Technologies are tested and fine-tuned by student engineers, who in turn gain valuable knowledge of the technology and the networking and data communications industry.

Program Description

- Take part in unique hands-on experience
- Visit high tech corporations
- Meet experienced engineers
- Explore career opportunities
- Work one-on-one with UNH-IOL engineers and college students
- Solve problems in new technologies
- Engage in engineering and computer science projects
- Engage in rapidly expanding global networking and data-communications industry at an early age

Learn Real World Skills

Each year, the UNH-IOL recruit's bright, ambitious high school students entering their senior year for paid internships. This prestigious program has been sponsored by industry representatives such as Extreme Networks, Liberty Mutual Insurance, ca, QA Café, and Verizon.
